EVERLIGHT ELECTRONICS CO., LTD.

# **Technical Data Sheet (Preliminary) Surface Mount Device (Power Top View LED)**

# 67-31B/YSC-AW1X2B9Z5/2T

### Features

• PLCC-3 package.

EVERLIGHT

- High flux output.
- High current capability.
- White package.
- Optical indicator.
- Colorless clear window.
- Ideal for backlight and light pipe application.
- Inter reflector.
- Wide viewing angle.
- Suitable for automatic placement equipment.
- Suitable for reflow and wave solder processes.
- Available on tape and reel (8mm Tape).
- Pb-free.
- The product itself will remain within RoHS compliant version.

### Descriptions

The 67-31A series is available in soft orange, red and yellow. Due to the package design, the LED has wide viewing angle and optimized light coupling by inter reflector.

This feature makes the ideal for light pipe application. The low current requirement makes this device ideal for portable equipment or any other application where power is at a premium.

## Applications

- Indicator and backlight for audio and video equipment.
- Indicator and backlight in office and family equipment.
- Flat backlight for LCD's, switches and symbols.
- Light pipe application.
- General use.

## **Device Selection Guide**

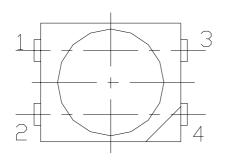

| Chip     |                  | Long Color  |  |
|----------|------------------|-------------|--|
| Material | Emitted Color    | Lens Color  |  |
| AlGaInP  | Brilliant Yellow | Water Clear |  |

prepared date:05-Jan-2006

### **Bin Range Of Dominant Wavelengths**

| Bin Code | Min. | Max. | Unit | Condition |
|----------|------|------|------|-----------|
| D3       | 586  | 589  |      |           |
| D4       | 589  | 592  | nm   | IF=50mA   |
| D5       | 592  | 595  |      |           |

### **Bin Range Of Luminous Intensity**

| Bin | Min  | Max  | Unit | Condition |  |
|-----|------|------|------|-----------|--|
| W1  | 1120 | 1420 |      |           |  |
| W2  | 1420 | 1800 | mcd  | IF=50mA   |  |
| X1  | 1800 | 2250 |      |           |  |
| X2  | 2250 | 2850 |      |           |  |

### **Bin Range Of Forward Voltage**

| Group | Bin | Min  | Max  | Unit | Condition |
|-------|-----|------|------|------|-----------|
| В9    | 2   | 2.15 | 2.35 |      | IF=50mA   |
|       | 3   | 2.35 | 2.55 | V    |           |
|       | 4   | 2.55 | 2.75 |      |           |

Notes:

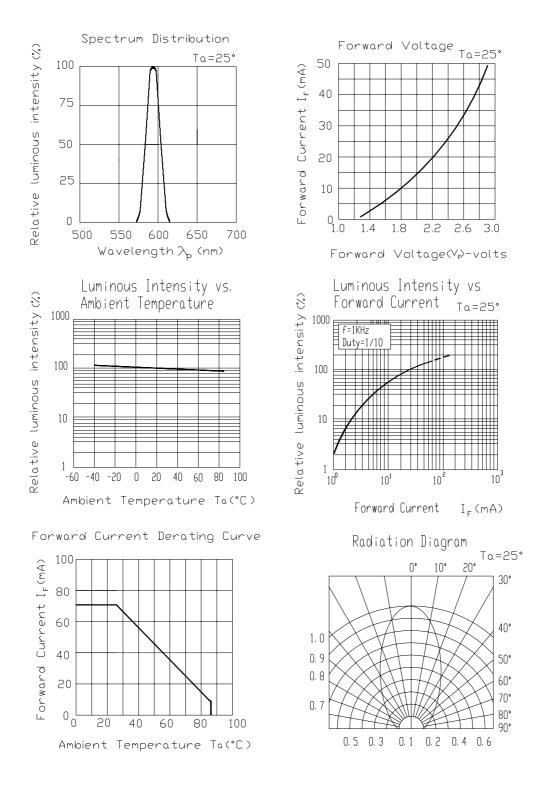

1.Tolerance of Luminous Intensity ±10%

2.Tolerance of Dominant Wavelength ±1nm

3.Tolerance of Forward Voltage ±0.1V

### **Typical Electro-Optical Characteristic Curves**

Everlight Electronics Co., Ltd. Device No. : http://www.everlight.com prepared date:05-Jan-2006 Rev. 1Page: 5 of 10Prepared by: Venis Wu

# EVERLIGHT ELECTRONICS CO., LTD.

## **Precautions For Use**

1. Over-current-proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change ( Burn out will happen ).

- 2. Storage
  - 2.1 Do not open moisture proof bag before the products are ready to use.
  - 2.2 Before opening the package: The LEDs should be kept at  $30^{\circ}$ C or less and 90%RH or less.
- 2.3 After opening the package: The LED's floor life is 1 year under 30 deg C or less and 60% RH or less. If unused LEDs remain, it should be stored in moisture proof packages.
- 2.4 If the moisture absorbent material (silica gel) has faded away or the LEDs have exceeded the storage time, baking treatment should be performed using the following conditions.
  Baking treatment : 60±5°C for 24 hours.
- 3. Soldering Condition
- 3.1 Pb-free solder temperature profile

- 3.2 Reflow soldering should not be done more than two times.
- 3.3 When soldering, do not put stress on the LEDs during heating.
- 3.4 After soldering, do not warp the circuit board.

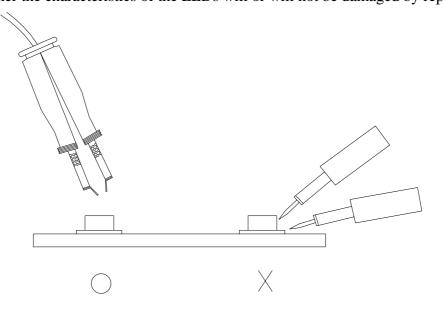

### 4.Soldering Iron

Each terminal is to go to the tip of soldering iron temperature less than  $350^{\circ}$ C for 3 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

#### 5.Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
