

Technical Data Sheet Opto Interrupter ITR

Features

- High sensitivity
- Cut-Off visible wavelength
- Thin
- Compact
- Pb free

Descriptions

ITR8307/L24/TR8

ITR8307/L24/TR8 is a light reflection switch which includes a GaAs IR-LED transmitter and a NPN photo-darlington with a high photosensitive receiver for short distance, operating in the infrared range. Both components are mounted side- by- side in a plastic package.

Applications

- Camera
- VCR
- Floppy disk driver
- Cassette type recorder
- Various microcomputer control equipment

Device Selection Guide

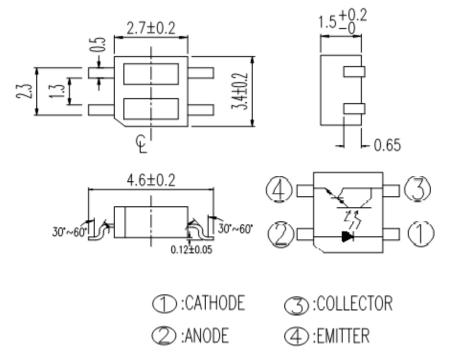

Device No.	Chip Material
IR	GaAs
PT	Silicon

Recommended Method of Storage

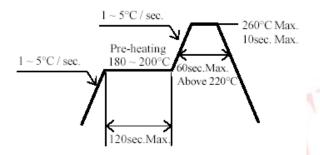

The following are general recommendations for moisture sensitive level (MSL) 4 storage and use:

- Shelf life in sealed bag: 12 months at < 40 °C and < 90% relative humidity (RH)
- After bag is opened, devices that will be subjected to reflow solder or other high temperature process must
 - a) Mounted within 72 hours of factory conditions < 30 °C/60%RH, or
 - b) Stored at <20% RH

ERLIG

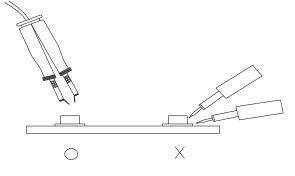

- Devices require bake, before mounting, if: Humidity Indicator Card is > 20% when read at 23 ± 5 °C
 - If baking is required, devices may be baked:
 - a) 192 hours at 40 ,and <5% RH(dry air/nitrogen) or
 - b) 96 hours at 60 ,and <5% RH for all device containers
 - c) 24 hours at 125 °C
- Soldering Condition

a) Pb-free solder temperature profile

- b) Reflow soldering should not be done more than two times.
- c) When soldering, do not put stress on the LEDs during heating.
- d) After soldering, do not warp the circuit board.
- Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
